

Example: Changing the 140mm travel fork into a 100mm travel fork using travel spacer.

Configurations of 32mm Fork Air Shaft Assemblies:

Float forks come equipped with a 140mm travel damper cartridge, and can be reduced all the way down to 80mm travel with travel spacer change.

F-Series Forks: You can decrease the travel of a F-Series fork with spacers but you cannot always increase the travel due to travel specific damper cartridge. The F-Series forks come with travel-specific damper cartridges i.e. 80mm, 100mm and 120mm. This means the F-80 fork cannot be made into a 100mm fork and a 100mm fork cannot be made into a 120mm fork.

WARNING: Do not increase the travel of the F-80 fork or 100mm fork. Damage to the fork will result ! Only FOX authorized service centers should perform travel change configurations to FOX FORX.
